SUMMARY

Mathematics student with 2+ years of experience developing analytics and data science solutions. Focused on leveraging problem solving ability, a comprehensive technical background, and artificial intelligence to develop data-driven insights.

EDUCATION

California Polytechnic State University - San Luis Obispo
Bachelors of Science in Mathematics | Expected Graduation Date : May 2027 | GPA : 3.83

WORK EXPERIENCE

Business Intelligence Analyst - *Sentry.io* (Internship, Summer 2026)

• Reduced annual Looker spend by $68,000 through migrating Looker persistent derived tables to Dataform, implementing incremental loading to minimize daily table build costs, and deprecating unused datasets
• Implemented evals and context guides in Hex to improve the accuracy of responses to user questions in Hex regarding company product usage data for 450+ stakeholders
• Developed Google BigQuery SQL views to integrate datasets from the company ETL Github repository into Looker Explores, and used these views to create dashboards tracking customer engagement and MCP usage trends across 2M+ customers
• Created a Slack bot that notifies the Business Operations team of data quality issues that need attention – the bot aggregates stakeholder data and connects with an LLM to create a weekly data maintenance report and proposes fixes to improve performance
• Collaborated with Data Engineers to clean and validate firmographic data ingested from ZoomInfo

Quantitative Analyst (Research and Development) - *Cal Poly Baseball* (Internship, 2025-Present)

• Leveraged Python, SQL, and a database containing 3+ years of NCAA Division I pitching data to develop analytics supporting player development, and contributing to the farthest NCAA postseason run in Cal Poly Baseball history (in 2026)
• Developed and trained an XGBoost Whiff+ machine learning model to predict swing-and-miss probability for pitch-level data, enabling identification of overperformance or underperformance of Cal Poly pitchers relative to expected results
• Designed a pitch sequencing system that analyzed historical pitching data to identify optimal pitch sequences in specific counts, and communicated these recommendations to the coaching staff to support pitching strategy
• Created Cal Poly Baseball Dashboard that provides insight to coaches through hitting spray charts, pitcher movement profiles, and locational success heat maps for hitters/pitchers

Analyst & Coach - *San Diego Elevate Baseball Club* (Part-time, 2023-2024)

• Managed training and development for 6 club teams ensuring practice plans optimized player development
• Performed statistical analysis on 100+ athletes performance data (batting splits vs. LHP and RHP) to create data-driven lineups

PERSONAL PROJECTS

FantasyLine

• Built Python pipeline to scrape, clean, and structure 500+ weekly NFL sportsbook player props
• Constructed probabilistic model converting sportsbook odds into fantasy point projections for 200+ NFL players, deployed via Streamlit app to support users in setting weekly fantasy lineups and evaluating betting lines

NFL Touchdown Regression Visualization

• Created linear regression model using volume and yardage features to forecast 2025 touchdown regression candidates
• Generated interactive Tableau dashboard that provides users draft insights by visualizing correlations between touchdown rates and overperformance/underperformance for RBs, WRs, TEs

Swarm Intelligence Trading Agent

• Engineered algorithmic trading agents that leverage swarm intelligence to optimize investment strategy
• Backtested and evaluated performance across 11 assets and achieved positive annual returns for 82% of tested tickers over 6 month period

EXTRACURRICULARS

• Record and produce House and R&B music, growing a personal Spotify page to an all-time high of 650 monthly listeners
• **Clubs:** Cal Poly Data Science, Cal Poly Quantitative Finance Club
• **Intramural Sports Teams** : D2 and D3 Basketball, D2 Flag Football, D2 Slow-Pitch Softball

TECHNICAL SKILLS

• **Languages & Tools**: Python, SQL, Looker, Google BigQuery, Dataform, Tableau, GitHub, Hex, VSCode, OpenRouter MCP
