SUMMARY

Mathematics student with 1+ years of experience developing analytics and data science solutions for Sentry.io and Cal Poly Baseball. Focused on leveraging exceptional problem solving ability, a comprehensive technical background, and artificial intelligence to develop data-driven insights.

EDUCATION

California Polytechnic State University - San Luis Obispo
Bachelors of Science in Mathematics
• GPA : 3.83 • Expected Graduation Date : May 2027 • Clubs: CP Data Science & CP Quantitative Finance Clubs

WORK EXPERIENCE

Business Intelligence Analyst - *Sentry.io* (Internship, Summer 2026)
• Saved $10,000 in yearly company spending by migrating company PDTs in Looker to Dataform, implementing incremental loading, and refactoring/cleaning datasets
• Implemented a new evaluation methodology and context guides in Hex for 10+ products, improving the accuracy of queries in Hex on company information by 450+ employees and stakeholders
• Developed BigQuery SQL views within ETL pipelines to integrate new data into Looker Explores, creating analytics-ready datasets that powered dashboards tracking customer engagement and MCP usage trends across 2M+ customers
• Collaborated with Data Engineers to clean and validate firmographic data (company size, employee count, industry) using SQL, ensuring high-quality integration into production data pipelines

Quantitative Analyst (Research and Development) - *Cal Poly Baseball* (Internship, 2025-Present)
• Leveraged Python, SQL, and a database containing 3+ years of NCAA Division I pitching data to develop analytics supporting player development, and contributing to the farthest NCAA postseason run in Cal Poly Baseball history (in 2026)
• Developed and trained an XGBoost Whiff+ machine learning model to predict swing-and-miss probability for pitch-level data, enabling identification of overperformance or underperformance of Cal Poly pitchers relative to expected results
• Designed a pitch sequencing system that analyzed historical pitching data to identify optimal pitch sequences in specific counts, communicating actionable recommendations to the coaching staff to support game planning and pitching strategy

Analyst & Coach - *San Diego Elevate Baseball Club* (Part-time, 2023-2024)
• Managed training and development for 6 club teams ensuring practice plans optimized player development
• Performed statistical analysis on 100+ athletes performance data (i.e. batting splits vs. LHP and RHP) to create data-driven lineups

Team Manager - *San Luis Coastal Unified School District* (Part-time, *2024-Present)*
Courtesy Clerk - *Ralphs* (Part-time, 2022-2025)

PERSONAL PROJECTS

FantasyLine
• Built Python pipeline to scrape, clean, and structure 500+ weekly NFL sportsbook player props
• Constructed probabilistic model converting sportsbook odds into fantasy point projections for 200+ NFL players, deployed via Streamlit app to support users in setting weekly fantasy lineups and evaluating betting lines

NFL Touchdown Regression Visualization
• Created linear regression model using volume and yardage features to forecast 2025 touchdown regression candidates
• Generated interactive Tableau dashboard that provides users draft insights by visualizing correlations between touchdown rates and overperformance/underperformance for RBs, WRs, TEs

Swarm Intelligence Trading Agent
• Engineered algorithmic trading agents that leverage swarm intelligence to optimize investment strategy
• Backtested and evaluated performance across 11 assets and achieved positive annual returns for 82% of tested tickers over 6 month period

TECHNICAL SKILLS

• **Languages & Tools**: Python, SQL, Looker, Google BigQuery, Tableau, GitHub, Hex, Claude MCP, VSCode
